Name of the Student: Rugved Zambare **PRN:** 123B1B140

Branch: Computer Engineering **Division: B**

Assignment:3

1. Objective

The primary objective of this assignment is to design and develop a dynamic e-commerce web application for a basketball shoes store using HTML, CSS, and JavaScript. The goal is to create an interactive and responsive platform that allows users to browse products, view details, and simulate shopping functionalities. Bootstrap CDN is used to enhance design consistency and ensure responsiveness across various devices.

---

2. Learning Outcomes

After completing this assignment, the following skills and knowledge are gained:

- Understanding how to build dynamic web pages using JavaScript.
- Applying HTML and CSS to structure and style an e-commerce interface.
- Using Bootstrap CDN to create responsive and visually appealing layouts.
- Learning how to display and manage product data dynamically.
- Gaining experience in implementing basic e-commerce features like product listing, filtering, and cart functionality.
- Improving UI/UX design skills for better user interaction.
- Enhancing problem-solving skills in front-end development.

---

3. Brief Theory

A dynamic web application is a website that updates content in real-time based on user interaction, without requiring a full page reload. In an e-commerce application, dynamic behavior is essential for features such as product display, filtering, and cart management.

HTML is used to structure the content of the web application, including product listings, navigation bars, and sections. CSS is used to style the layout, improve visual appeal, and ensure proper spacing and alignment.

JavaScript adds interactivity to the application by dynamically updating content, handling user actions (such as adding items to the cart), and manipulating the DOM (Document Object Model).

Bootstrap is a front-end framework that provides ready-made components like cards, navbars, and grids. By using Bootstrap CDN, developers can quickly create responsive designs that adapt to different screen sizes, making the e-commerce store accessible on desktops, tablets, and mobile devices.

Conclusion:

In this assignment, a dynamic e-commerce web application for a basketball shoes store was successfully designed and developed using HTML, CSS, and JavaScript. The project demonstrates the effective use of front-end technologies to create an interactive and responsive user interface. By integrating Bootstrap CDN, the application achieves a clean layout and ensures compatibility across different devices.

The implementation of dynamic features such as product display and user interaction enhances the overall user experience. This project helps in understanding how real-world e-commerce platforms function at a basic level and strengthens practical knowledge of web development. Overall, the assignment provides valuable experience in building modern, user-friendly web applications.
